Gender Equality Index 2023

The data for 2023 Index is mostly from 2021 and 2022.

Progress in gender equality

With 70.2 points out of 100, the European Union still has much to do to reach gender equality.¹ The EU's current score represents a moderate improvement of 1.6 points compared with the previous edition of the Index – the highest year-on-year rise since the first edition of the Index in 2013. The increase in the EU's score since 2020 is mainly due to progress in gender equality in the domains of time (+ 3.6 points) and work (+ 2.1 points). Since 2010, the EU's score has increased by 7.1 points, primarily driven by advances in the domain of power (+ 17.2 points).

[1] The Gender Equality Index 2023 has been affected by certain changes in EU-wide surveys and through the use of the most up-to-date sources. For the first time, it benefits from EIGE's survey data on gender gaps in care, individual and social activities carried out across the EU in 2022, and from new data from the 2021 EWCTS survey (Eurofound). Regulation (EU) 2019/1700, which came into force from 1 January 2021, also introduced some changes into the EU-LFS. These methodological changes will affect nine indicators included in the domains of work, knowledge and time, together with their respective scores, as well as the overall Index and the analysis of intersecting inequalities using the respective indicators.

An analysis has been carried out of the possible impact that these changes may have had on the Index and on the interpretation of the corresponding time series. Despite the break in time series that the changes entail, the time series analysis can be considered adequate (see Index 2023 report).

			Change since	
			2010	2020
SE	82.2		2.1	-1.7
